Idea: Move air more efficiently.

Emerson Climate Technologies' ventilation solutions have one mission: to move air efficiently throughout buildings. Using the most advanced technologies in conjunction with air filters and purifiers improves total indoor air quality. Our world-class performance testing ensures both product safety and reliability in everything from commercial kitchen ventilators to residential attic fans. Our products are the most durable in the industry, and our experience in the HVAC market brings you the best in innovation — and delivers it promptly through our worldwide distribution network. And our state-of-the-art product development and design mean long-lasting, energy-efficient solutions for the best possible ventilation.

Now, those solutions are even better.

Teaming the experience and expertise of Emerson Power Transmission, Emerson Ventilation Products and Emerson's Control Techniques creates a new dimension of ventilation solutions; solutions in which the whole is truly greater than the sum of its parts.

Idea: Enhance the performance of ventilation systems.

Emerson Power Transmission has built its reputation as a leader in power transmission drives, components and bearings. The company's well-respected brands represent top-of-the-line products, including Browning® V-belt drives and SealMaster®, the world's premium mounted bearing line. Now, SealMaster bearings combine new technologies with patented lubricants for longer life and cooler running temperatures, while Browning offers the industry's only single-fabric wrapped belt.

Emerson Ventilation Products are known for being more durable and quieter than any competitive offering. Our direct-drive downblast, belt-drive downblast, direct-drive upblast and belt-drive upblast centrifugal ventilators continue that tradition.

Control Techniques' variable speed drives bring you proven power savings. Just as important, they create an early warning detection system that alerts you to potential problems and helps protect the life of the drive. Our ability to accurately extract power and speed data, then instantly communicate that information to a controller, lets you take preventative maintenance measures – before a failure occurs.

Idea: Bring it all together to optimize your operation.

Every innovation, every product, was designed and built for integration. Each stands alone as a standard of excellence. But put together, they create a ventilation solution unmatched in the industry. A solution that delivers cleaner air and increased comfort, plus higher energy efficiency and reliability – everything you need to optimize your operation.

New ideas to ignite your bu

Idea: Bring a new level of integrated solutions to ventilation applications.

Hospitals. Restaurants. Hotels. Office buildings. Each has its own set of demands and challenges. But each shares some common concerns. Especially the need for clean, smoke-free air and the highest-possible levels of energy efficiency. That's why Emerson Climate Technologies™ is integrating three distinct product lines; to bring you ventilation solutions that set the new standard for reliability – and help you build a better business.

Emerson Power Transmission,™ Emerson Ventilation Products and Emerson's Control Techniques work hand in hand to deliver an array of built-in benefits, including variable speed drives that consume “just enough energy,” preventative maintenance capabilities and early warning detection systems. The result: clean air in hospitals, smoke and grease-free restaurants and increased comfort for employees and customers in every building.

Idea: Form a partnership today. Accelerate your business tomorrow.

There's a world of opportunity to build your business and leave your competitors behind. And it all starts right here with Emerson Climate Technologies. Unrivaled technology. Superior service. Ultimate comfort. It's time to harness breakthrough solutions that do more than just grow your business. They ignite your business. It's time for Emerson Climate Technologies.

Air Comfort Products

Energy-efficient residential and industrial ceiling fans

Clive Samuels & Associates

Consulting engineering services including: electrical, HVAC, lighting, tele and data communications, refrigeration, fire protection, plumbing, commissioning, energy analysis and energy management

Computer Process Controls™

Comprehensive electronic HVACR, lighting and energy management control systems for retail, institutional, office and food service applications

Control Techniques

Worldwide leader in providing energy efficient, high performance, AC Motor Drives from 1/3 to 1000 hp for HVAC applications

Copeland®

Industry-leading refrigeration and air conditioning compressors for commercial and residential applications

Design Services NetworkSM

Comprehensive heating, cooling and refrigeration engineering, design and testing services for HVACR, industrial and scientific equipment manufacturers

Distribution Services

Centralized aftermarket support for wholesalers, contractors and end-users, covering the full line of Copeland, HVAC Motors™ and Flow Controls products and services

Educational ServicesSM

Integrated HVACR technical training seminars and products for contractors and end-users

Emerson Power Transmission

World leader in quality bearing, V-belt drive and power transmission drive products

Flow Controls

Precision electronic mechanical flow controls to monitor and protect refrigeration and air conditioning systems

Fusite®

Reliable hermetic glass-to-metal terminals, sight glasses and precision metal stampings

Heating Systems

Design, testing and manufacturing of packaged heat for residential and commercial manufacturers

HVACR Motors

Leading producer of air moving motors and variable speed controls for the HVACR industry

Retail Services

Customized retail facility services including remote equipment monitoring, service dispatch, food quality and safety monitoring, power monitoring, energy efficiency analysis and project management

Therm-O-Disc®

Proven reliable temperature controls, sensors, probes, switches and motor protectors for heating and air conditioning applications

Ventilation Products

Completely customizable ventilation systems, including industrial fans and blowers, for the optimal match to your application needs

White-Rodgers®

Your source for programmable thermostats, electronic and media air cleaners, humidifiers, universal gas valves and nitride ignition upgrade kits for most gas furnace HSI applications
