

Emerson Ventilation Products

Idea: Make the places we visit healthier and more comfortable.

Quality ventilation is vital to quality of life. Every building in which we work, shop or eat needs the highest-possible air quality for our health and comfort. That's why Emerson Ventilation Products works hard every day to bring quieter, more effective solutions to today's commercial and industrial ventilation challenges.

Our products are more durable than any others on the market. And they run with far less noise – and far better efficiencies. So hospital patients can breathe only safe, sterile air. Restaurant patrons can enjoy meals in comfort, without smelling smoke or grease from the kitchen. And workers in office buildings aren't bothered by disturbing noises from ventilation systems.

Idea: Offer a choice for every application.

Emerson Ventilation Products has ventilator solutions for every challenge, including:

- *Direct-drive downblast* centrifugal roof and wall ventilators designed for applications where steady exhaust ventilation is needed under low to moderate static pressure conditions.
- *Belt-drive downblast* centrifugal roof ventilators for roof-mounted exhaust of commercial and industrial buildings.
- *Direct-drive upblast* centrifugal roof and wall ventilators built for continuous operation to exhaust foul air, smoke, fumes, odors and grease-laden vapors from range hoods and commercial cooking applications.
- *Belt-drive upblast* centrifugal roof and wall ventilators for both commercial and industrial applications.
